Abstract. The early results on astrochemistry from the Cores to Disks (c2d) Legacy program will be summarized, with a focus on those without separate posters. The c2d program focuses on the formation of low-mass stars in nearby (within about 300 pc) clouds. Spectroscopy with IRS includes the following topics: ices seen against background stars, in protostellar envelopes, and in disks; the structure of protostellar envelopes; grain growth and mineralogy, PAHs, and gas in circumstellar disks.

Keywords. Keyword1, keyword2, keyword3, etc.

1. Introduction

Results on astrochemistry from the c2d Legacy Program Evans et al.(2003) will be presented. The details are not available at this time.

Acknowledgements

Support for this work, part of the Spitzer Legacy Science Program, was provided by NASA through contracts 1224608, 1230779, and 1256316 issued by the Jet Propulsion Laboratory, California Institute of Technology, under NASA contract 1407. Astrochemistry in Leiden is supported by a NWO Spinoza grant and a NOVA grant.
